

Paul G. Sternhagen, DDS, FAGD, FDOC

Philosophy of Care

I am proud to have served patients since 1985. My dental team and I are committed to our relationship-based practice. This commitment in combination with hundreds of hours of post-doctoral continuing education allows us to offer you and your family the high quality of care and service that you are looking for.

The purpose of our practice is to advance the health of others through appropriate advice and care.

As your dentist, I can assure you that you will receive the personalized attention you deserve. We strongly believe in the value of the Informed Choice and feel that life-long dental health is only possible when the caregiver and the patient work together to achieve clearly defined goals, which they both feel, are appropriate.

Comprehensive evaluations involve a gentle and careful review of the condition of the teeth, gums, muscle system, bite, TMJ's, previous dental work, and esthetics. They are intended to reveal not only current needs, but also trends, which may lead to fracture problems. Our patients value this accurate and timely information as it allows them the opportunity to make educated decisions and work collaboratively with us to achieve shared treatment goals.
